- 3) Well, so will you fill out this form?    4) No problem, Maybe some other time

**Part B: Cloze Passage**

*Read the passages and then answer the questions by choosing the best choice.*

The Eiffel Tower is very famous in the world. Alexander Eiffel with his team of (16)..... designed it. Alexander and his team engineered the different parts of the tower very (17)..... No part is ever replaced.

Alexander built the tower for the 1889 World's Fair. In the beginning the tower was not a very popular one and they promised to destroy it later on. But, after the first year of opening, many international tourists (18).....the tower and this made Alexander a very rich person. Besides, Alexander Eiffel did many experiments on the tower and made everybody sure that the tower was very strong. In 1898, they understood that they (19)..... also use the Eiffel Tower as an amazing radio tower. And this (20)..... it.

- 16. 1) scientists    2) translators    3) painters    4) engineers
- 17. 1) good    2) well    3) late    4) hard
- 18. 1) destroyed    2) spent    3) visited    4) planned
- 19. 1) can    2) could    3) should    4) must
- 20. 1) saved    2) climbed    3) hurt    4) moved

**Part B: Reading Comprehension**

*Read the passages and then answer the questions by choosing the best choice.*

Dr. Bianco tells us interesting facts about our heart. The heart sends blood in the body, so it looks red like meat. In people who are fat, the heart looks yellow because of the fat around the heart. The heart is in the middle of the chest, between the two lungs.

But what does the heart actually do? Dr. Bianco says that the heart pumps blood around the body.

Each living part of the body needs blood to live, and that's why it's important for the blood to go to different parts of the body.

When you're exercising, it takes your blood about ten seconds to get from your heart to your big toe and back. In fact, a kid's heart has to push blood through about 60,000 miles (96,560 kilometers) of blood vessels—that's long enough to circle the Earth two and a half times!

To push blood in the body, an average heart beats a hundred thousand times a day. That means that in a lifetime, the average human heart will beat more than two and a half billion times. Because the heart is so important, the American Heart Association tells people that they need to take care of their hearts. Exercise and healthy foods can help the heart to do its job well.

- 21. In one's lifetime the heart beats almost .....
  - 1) 60,000 million times    2) a hundred thousand times
  - 3) more than two and a half billion times    4) as much as it takes to travel around the world
- 22. "They" in line 12 to .....
  - 1) hearts    2) people    3) foods    4) seconds
- 23. The heart looks red like meat because .....
  - 1) the meat has fat    2) it is very big to carry blood
  - 3) it has fat in very fat people    4) it has blood to move around the body

24. The exact position of the heart is .....

- 1) not clear      2) in the chest      3) above the lungs      4) in the right side of the body

25. According to the text .....

- 1) the heart pumps blood slowly      2) the blood pumped doesn't reach the toe  
 3) the blood circles the Earth two and a half times      4) the blood circles a long distance in the body
